

1. Title: PORTRESS — PORTuguese REgistry of Sjögren's Syndrome

2. Abstract

Sjögren's Syndrome (SS) is a systemic autoimmune rheumatic disease targeting primarily exocrine glands, particularly salivary and lacrimal glands. Clinical and serological markers can impact disease expression, influence treatment responsiveness and determine prognosis. Fully characterizing an individual patient, or a group of patients, ensures that all information regarding disease characterization, treatment response and prognosis is available to the assisting Rheumatologist. Reuma.pt is a great tool to systematically evaluate SS patients and expand our current knowledge on this systemic rheumatic disease. We intend to present our Reuma.pt protocol and characterize **PORTRESS**, the Portuguese registry of SS patients.

3. Research team

a. Proponent

Matilde Bandeira^{1,2}

b. Research team

Matilde Bandeira^{1,2}, Manuel Silvério-António^{1,2}, Nikita Khmelinskii^{1,2,3}, Filipe Barcelos^{4,5}, João Eurico Fonseca^{1,2,3}, Vasco C. Romão^{1,2,3}

c. Institutions

The project will be coordinated by the proponent (first author) and the senior author (last author), with the following affiliations:

1. Rheumatology Department, CHULN, Centro Académico de Medicina de Lisboa (CAML)
2. Rheumatology Research Unit, Instituto de Medicina Molecular, Faculdade de Medicina, Universidade de Lisboa, CAML
3. Clínica Universitária de Reumatologia, Faculdade de Medicina, Universidade de Lisboa, CAML
4. Instituto Português de Reumatologia, Lisbon, Portugal
5. Rheumatology Department, Hospital Cuf Descobertas, Lisbon, Portugal

The project is open to all national centres willing to participate, which will all be formally invited.
